PROFESSIONAL SUMMARY

Technical Support Engineer with experience supporting Windows and Linux environments while developing and maintaining Python-based applications. Skilled in diagnosing software defects, troubleshooting production issues, performing root cause analysis, and automating operational tasks using Python and Bash. Built and maintain **Candor**, a modular Python application for IT and cybersecurity operations, providing hands-on experience with software debugging, CLI development, configuration management, and application support.

Experienced in supporting Microsoft 365 users, troubleshooting authentication and networking issues, documenting solutions, and collaborating across technical teams to resolve incidents efficiently. Passionate about solving complex technical problems and bridging software engineering with IT operations to deliver reliable, user-focused solutions.

TECHNICAL SKILLS

Programming & Scripting

- Python
- Bash
- PowerShell (Basic)
- JSON
- YAML

Operating Systems

- Windows 10/11
- Ubuntu Linux
- Kali Linux

Application Support

- Incident Triage
- Break-Fix Support
- Root Cause Analysis
- Software Debugging
- Log Analysis
- Application Configuration
- User Support
- Technical Documentation
- Knowledge Base Documentation
- Escalation Management

Web Technologies

- HTML
- CSS
- JavaScript (Fundamentals)
- REST APIs

Networking

- TCP/IP
- DNS

- DHCP
- VPN Fundamentals
- IP Addressing
- Wireshark
- pfSense
- Network Troubleshooting

Microsoft Technologies

- Microsoft 365
- Microsoft Entra ID
- Outlook
- OneDrive
- MFA
- User Provisioning
- Active Directory Fundamentals

Support Tools

- Jira
- Zendesk
- Peppermint
- Intercom
- Git
- Visual Studio Code

PROFESSIONAL EXPERIENCE

Candor Labs

Technical Support Engineer & Python Developer

2023 – Present

Designed and developed **Candor**, a modular Python application that assists with IT and cybersecurity operations, while providing technical support and troubleshooting for Windows, Linux, and Microsoft 365 environments.

Key Achievements

- Designed and maintained a modular Python application using reusable components and command-based architecture.
- Diagnosed and resolved software defects through structured root cause analysis and debugging.
- Investigated runtime exceptions, validation failures, parsing issues, and command execution errors.
- Developed Python modules for automation, validation, configuration management, and command execution.
- Created CLI workflows that simplified troubleshooting and operational tasks.
- Automated repetitive operational processes using Python and Bash scripting.
- Maintained Linux development environments and managed application configuration.
- Supported Windows workstations and Microsoft 365 users by resolving authentication, Outlook, OneDrive, and account access issues.
- Configured user accounts, password resets, MFA, and Microsoft Entra ID administration.
- Troubleshoot networking issues involving DNS, DHCP, TCP/IP, VPN connectivity, and browser-related problems.
- Documented troubleshooting procedures, workflows, and operational runbooks to improve knowledge sharing.

- Collaborated across multiple technical domains including software development, networking, and system administration to resolve incidents efficiently.

Junior Global Data Protection & Cybersecurity Team Member

DLA Piper

2022 – 2023

- Supported authentication and user access management activities.
- Assisted with incident documentation and audit logging.
- Participated in troubleshooting access-related issues.
- Worked with internal teams to investigate and resolve technical problems.
- Maintained documentation supporting security and operational processes.

Freelance IT Support Technician

2020 – 2022

Provided remote and onsite technical support for individuals and small businesses.

Responsibilities

- Diagnosed hardware and software issues on Windows systems.
- Installed and configured operating systems and productivity software.
- Resolved printer, networking, DNS, DHCP, Wi-Fi, and browser issues.
- Performed software installations and upgrades.
- Supported Microsoft Office and Microsoft 365 users.
- Documented support requests and resolutions.
- Provided user training and technical guidance.

PROJECTS

Candor – Modular Python Operations Assistant

Designed and developed a modular Python CLI application for IT and cybersecurity operations.

Features

- Command parsing and validation
- Configuration management
- Modular architecture
- CLI interface
- Tool execution engine
- Structured logging
- Error handling
- Automation workflows
- Extensible plugin system

Technologies

Python • Bash • Linux • Git • JSON

CERTIFICATIONS

- CompTIA Security+
- ISC² Certified in Cybersecurity (CC)
- TCM Security – Practical Help Desk Certificate (2026)
- Cisco Networking Academy – Networking
- Cisco Networking Academy – Cybersecurity
- Cisco Networking Academy – Network Automation
- Microsoft Learn – Azure Fundamentals
- Microsoft Learn – Identity & Access Management
- Microsoft Learn – Secure Networking

- Moringa School Cybersecurity Bootcamp
- SQL Basics (Simplilearn)
- SQL + Postman (Udemy)

SELECTED ACHIEVEMENTS

- Designed and developed a production-ready modular Python application from concept to deployment.
- Automated operational workflows using Python and Bash scripting.
- Resolved approximately **95% of first-level technical issues** without escalation.
- Reduced recurring incidents by creating structured troubleshooting documentation and knowledge base articles.
- Supported Microsoft 365 users with Outlook, OneDrive, authentication, and account administration.
- Built and maintained Windows, Linux, Active Directory, and networking lab environments for troubleshooting and testing.

EDUCATION

Bachelor of Science in Biotechnology and Bioinformatics

University of Eldoret

2015
